Lisbon, Portugal – 11.11.2024 – Beelinguapp, the popular language learning app, is excited to announce the launch of its innovative AI-powered "Create Stories" feature at Web Summit 2024. This groundbreaking tool allows users to generate personalized stories tailored to their language learning needs, making the experience more engaging and effective than ever before.

With the "Create Stories" feature, learners can customize various aspects of their language practice by selecting the length and difficulty of the story, focusing on specific vocabulary words they want to learn, and practicing at their own pace. Powered by advanced artificial intelligence, the system dynamically generates comprehension questions at the end of each story to reinforce understanding and maximize learning retention.

Transforming Language Learning through AI

This new AI-based tool revolutionizes the language learning experience by combining customization with interactive content. Whether users are beginners or advanced learners,

Beelinguapp's "Create Stories" feature offers a personalized path that adapts to their unique preferences and goals. It transforms passive reading into an immersive, interactive learning experience that enhances engagement and makes language acquisition more enjoyable.

Web Summit 2024 attendees will be the first to experience the full capabilities of this feature. Beelinguapp's presence at the event provides an exclusive opportunity for participants to test this revolutionary tool and see firsthand how AI can be harnessed to redefine language education.

David Montiel, CEO of Beelinguapp, commented:

"We are thrilled to unveil our AI-powered 'Create Stories' feature at Web Summit 2024. Language learning should be engaging and adaptable, and this tool offers exactly that—a customized experience driven by AI that helps learners practice vocabulary and grammar in a way that suits their level and interests. We believe this innovation sets a new standard for interactive language education."

Engaging, Personalized Learning for All

Beelinguapp's "Create Stories" feature marks a significant leap forward in the world of digital language learning. It allows users to become active participants in their education by crafting stories based on their individual learning objectives. The AI behind the feature ensures that users not only practice reading but also master comprehension through tailored questions.

Call to Action for Web Summit 2024 Attendees

Attendees of Web Summit 2024 can visit Beelinguapp's booth to experience this groundbreaking feature and learn more about the app's commitment to making language learning personalized and fun. Visit [Booth Number] to engage with the team and discover how "Create Stories" can enhance your language skills.
