GradeBuilder Launches a Platform for IT Education for People with ADHD and Focus Challenges

Inclusive educational platform **[GradeBuilder](#)** has announced the launch of a new project aimed at helping people with ADHD and focus challenges to succeed in IT professions. The platform is designed to meet the specific needs of individuals with attention disorders and offers accessible, personalized learning that promotes career growth. **GradeBuilder will be showcasing this innovative project at Web Summit in Lisbon this November, inviting attendees to explore how the platform can transform IT education for neurodivergent individuals.**

To create this unique platform, **GradeBuilder** has brought together the expertise of key professionals. The team includes **psychiatrist Alica Gor**, who helps integrate best educational practices for people with ADHD and other neurodivergent conditions. The project also draws on the experience of CEO **Iuliia Gorshkova**, who is an engineer and educator with ADHD. Drawing from her own successful experience of self-learning in programming, Iuliia created a course for adults that helps people with learning difficulties achieve success in IT. Her course, presented on the educational platform Otus, has already helped hundreds of adults become QA engineers. In addition, Iuliia actively participated in programs aimed at teaching IT professions to individuals with autism.

"I personally faced learning challenges, but that didn't stop me from building a successful career," says Iuliia Gorshkova. "Now I want to show others that learning difficulties don't mean failure in a career. With **GradeBuilder**, we aim to make learning comfortable, accessible, and above all, effective for everyone who finds it difficult to learn."

GradeBuilder has conducted more than **1,500 studies and surveys**, examining the experiences of other schools, psychotherapists, and scientific research on the education of people with ADHD and focus challenges. As a result, the platform will offer a system of **individual learning plans** supported by artificial intelligence, developed by co-founder **Pavel Salovskii**, Chief AI Officer. The platform will be not only inclusive and adaptive but also affordable, making high-quality education accessible to a wide audience.

The technical lead of the project, **Dmitry Blokhin**, an experienced CTO, ensures that the platform will operate quickly and efficiently, meeting user needs and remaining cutting-edge in its technological capabilities.

At the **MVP stage**, **GradeBuilder** has already attracted its first clients, including B2B clients. The platform has become popular among IT companies that seek to train their employees with a focus on individual needs.

GradeBuilder invites everyone to join a new era of inclusive and personalized education, where anyone can find their path in IT, regardless of learning difficulties.
