

HealUA to Transform Crisis Healthcare at Web Summit 2024

HealUA: A Revolutionary Mobile App Connecting Ukrainian Physicians to Global Medical Expertise

As Ukraine's healthcare system faces catastrophic challenges from the ongoing war, **HealUA** emerges as a beacon of hope, providing critical medical support in real-time. At **Web Summit 2024**, HealUA will showcase how its revolutionary platform enables Ukrainian physicians to connect with other Ukrainian colleagues, as well as with international specialists, ensuring life-saving consultations even in the most devastated areas.

Over **1,500 healthcare facilities** in Ukraine have been damaged, leaving medical professionals overwhelmed and isolated. **HealUA** responds by empowering doctors to receive expert guidance through secure, peer-to-peer consultations. Already, **4,200 certified physicians** across **39 specialties** from **30 countries** are using the platform, with over **500 clinical cases submitted** — **90% of which were answered within 24 hours**.

"HealUA is a game-changer for Ukrainian physicians," said Nelya Melnitchouk, founder of HealUA. **"Our mission is to empower doctors in Ukraine with the knowledge and resources they need to provide the best possible care for their patients. By connecting them with a vast network of medical professionals, we can help bridge the gap between local healthcare and global medical advancements."**

This app was created to help doctors who had limited access to hospitals and were isolated due to the war. But now HealUA has become an application that increases the efficiency of Ukrainian doctors regardless of their location and working conditions. The war has become an impetus for solving a more global problem in the field of medicine - quick access to reliable medical information.

While the platform is already having a transformative impact, HealUA is poised for even more growth. Future plans include integrating **AI-powered verification systems** and **educational tools**, allowing doctors to stay updated with the latest guidelines and medical advancements.

At Web Summit 2024, HealUA is not just presenting — it's seeking **tech support** and partnerships with **IT startups** to overcome the technical challenges of scaling the platform. This is a unique opportunity for tech innovators to collaborate in shaping the future of global healthcare, starting with a country in the midst of an unfolding humanitarian disaster.

HealUA is actively inviting **investors, partners, and tech experts** to help expand this game-changing solution, building a global network that empowers doctors in war zones and beyond.

About HealUA

HealUA is a mobile application connecting Ukrainian doctors with international experts for real-time peer-to-peer medical consultations. Created in response to the destruction of Ukraine's healthcare system, HealUA aims to maintain and improve patient care by providing access to specialist advice when it's needed most. The platform is a model for delivering healthcare in crisis and conflict zones worldwide.
