Psychometric Systems Unveils Compatibility Assessment Tool to Transform the Search for a Life Partner at Web Summit

(Lisbon, Portugal, November 14ᵗʰ, 2023) – In a bid to revolutionize the landscape of relationship dynamics, Psychometric Systems today announces the beta launch of a groundbreaking technology designed to dissect and understand the complex layers of human compatibility. The MindCouple™ report is poised to redefine how individuals seek and establish meaningful connections by utilizing advanced psychophysiological data analysis.

Created with input from psychologists, data scientists, and relationship experts, MindCouple™ is the first of its kind—a comprehensive, user-friendly, and scientifically validated instrument that assesses compatibility across multiple dimensions. It is not just another dating app but a sophisticated tool that peels back the layers of surface attraction to reveal the intricate puzzle of what truly makes two people compatible.

Main Features of MindCouple™ Report:

Compatibility Scores: MindCouple delivers three distinct scores reflecting emotional, physical, and lifestyle compatibilities, offering a multifaceted view of potential partnership success.

Compatibility Type and Pacesetter: The technology identifies the overarching compatibility type and determines the 'pacesetter'—the key traits that set the tone for the relationship.

General Description of Examinee as a Partner: It provides an insightful summary of a user's qualities as a partner, allowing for deep self-awareness and personal growth.

Attractive Aspects of Partner for Examinee: MindCouple™ reveals what a user will find most appealing in a potential mate, based on their psychophysiological profile.

Recommendations for Examinee: Based on the assessment, users receive tailored recommendations to guide them in finding and nurturing a compatible partnership.

"Our mission is to take the guesswork out of finding a life partner," explains Dumitru Grigore PhD, physicist, psychologist, inventor of the MindMi™ System. "Until now, people had to navigate the murky waters of dating and relationships without a clear map. MindCouple not only provides that map but also illuminates the path to finding a deeply compatible partner."

"MindCouple™ is the culmination of years of research into the art and science of love and compatibility," said Andrei Galos, CEO of Psychometric Systems. "We've harnessed the power of psychophysiological data to crack the code of relationship compatibility. Our vision was to create a

tool that goes beyond the superficial swipes of today's dating culture. With MindCouple™, we are not just introducing a tool, we are ushering in a new era of intelligent matchmaking that understands the complexities of human connection. This is more than a smart technology—it's a movement towards more meaningful, profound relationships that are built to last."

MindMi™ proprietary algorithm goes beyond the superficial, leveraging data points collected from the MindSpring™ hand scanner from the examinee in less than 5 minutes. The data collected by the scanner is shared immediately with the MindDeck™, cloud based, web application. The process is completely objective considering that no one can influence the outcome in any way. With the help of the MindDeck™ web application and based on different psychological indicators of interest, the user generates the MindCouple™ report in less than one minute.

Psychometric Systems produces the MindMi™ System which has been calibrated on over 15.000 people from different countries in North America, Europe and Asia. It can generate reports like Personality report, Cognitive and Emotional Potential reports, 62 indicators report, Interpersonal and Group compatibility reports, Talent report (for children in particular) which are available in five languages, including English. Beyond the search for a life partner, its use cases include Career Guidance and Management, Collaboration Enhancement, Recruitment, Organisational Efficiency, Talent Management. It received the Gold Medal at the International Exhibition of Inventions Geneva and the Grand Prize at Patriotfest Romanian National Security Contest.

Psychometric Systems invites individuals longing for compatibility, journalists curious about the future of relationship tech, and relationship professionals seeking to expand their toolkit to explore MindCouple™ and MindMi™ System's potential. For more information, to schedule a demo, or to arrange an interview with MindCouple™ CEO or COO, please contact Tudor Galos at tudor.galos@psychometricsystems.com or at +40.740.104.779.

About Psychometric Systems:

Psychometric Systems is a company founded in August 2014 in Romania that aims to research and develop solutions in the field of psychological evaluation systems. The company created and developed MindMi™ system, a patented psychometric assessment system capable of generating unbiased psychological profiles in under 5 minutes by simply scanning your hands. Our team believes in passion, inspiration, teamwork and unyielding integrity. The members of Psychometric Systems team are continuously involved in internal research projects and collaborations with the industry, business and academia in order to improve product and services in the benefits of our customers.
