

Nature Plant to Offer Exclusive Access to Its Carbon Reduction Platform at Web Summit 2024

*Attendees of Web Summit 2024 Will Gain Early Access to Nature Plant's Reforestation Tool,
Pioneering a Transparent Approach to Carbon Neutrality*

Nature Plant, a groundbreaking environmental tech startup, is excited to announce at Web Summit 2024 the launch of its innovative platform designed to empower individuals and businesses to reduce their carbon footprint through reforestation. By utilizing GPS tracking, Nature Plant guarantees that every tree planted is accurately documented, providing full transparency where the tree is planted by GPS location. Web Summit attendees will have exclusive early access to this innovative tree-planting and carbon-tracking platform.

The Problem: A Global Need for Action

With global warming and deforestation posing serious threats to the future of the planet, action is needed now more than ever. Nature Plant is addressing this crisis head-on by providing a solution that enables everyone to participate in tree planting initiatives, whether through donations or direct purchases of trees. For every tree planted, Nature Plant tracks and records the exact location using GPS and generates a unique QR code that serves as proof of planting.

The Solution: Technology Meets Sustainability

Nature Plant's platform is designed to make environmental contributions easy and transparent. Each tree planted is tracked with detailed data, providing proof of your impact on the environment. Users can track the trees they've purchased, view the location where they were planted, and monitor their personal impact on reducing carbon emissions.

Exclusive for Web Summit 2024 Attendees

During Web Summit 2024, attendees will have the **first opportunity** to explore Nature Plant's software before its public launch. This exclusive access will allow them to:

- Purchase trees and track their individual contribution to carbon reduction.
- Generate a unique **QR code** and receive real-time updates, including GPS coordinates and the status of their trees.
- Share their achievements on social media to inspire others to join the movement.

Why It Matters: Empowering People to Go Carbon Neutral

The average person generates about **9 tons of carbon emissions** per year, and each tree planted through Nature Plant can absorb up to **0.25 tons of carbon annually**. By offering a transparent, verifiable method to contribute to global reforestation, Nature Plant makes it easy for everyone to help combat climate change and achieve carbon neutrality.

Community-Driven Impact

Nature Plant is not just about planting trees; it's about building a global community of changemakers. By offering a seamless and transparent process, the platform encourages more people to get involved in environmental initiatives. Users can share their achievements on social media and inspire others to take action.

About Nature Plant

Founded in 2024, Nature Plant is an environmental tech startup that aims to reduce global carbon emissions through innovative reforestation solutions. The platform connects individuals and companies with tree-planting initiatives worldwide, ensuring transparency and authenticity in every step. With Nature Plant, everyone can contribute to a greener, more sustainable future.

Nemanja Milivojević, founder and CEO of Nature Plant, states: “We wanted to create a platform that gives individuals and businesses the opportunity to make a tangible impact on the environment while providing them with full transparency. With our technology, users can be confident that their contributions are making a real difference.”
