

## **Multimedia artist VNCCII is sending her Sci-Fi Novel to the Moon and Music to Deep Space**

Boundary-pushing multimedia music artist VNCCII is set to send new original music to Deep Space as well as her science fiction novel to the Moon. The music lives within VNCCII's expansive sci-fi universe, which she has imaginatively woven into her immersive performances, and upcoming novel, *Galacta.i.ssance and the VNCCII Awakening*.

VNCCII, the alter ego of Samantha Tauber, is not just a musician; she's a "Super Sentient A.I Superheroine" avatar from the intergalactic future. This fictional character not only serves as the central figure in VNCCII's broader narrative but also embodies her artistic vision of fusing music with immersive storytelling.

A rising force in the music industry, VNCCII blends pop, epic electronica, and cinematic soundscapes with imaginative sci-fi themes. Inspired by influential artists like Daft Punk and Michael Jackson, her music evokes deep emotions and deeply explores the human experience. VNCCII's sound is a forward-looking fusion of futuristic electronica and acoustic instruments, creating a 'Future Classic' vibe that is both innovative and timeless.

Over the past year, VNCCII has made a resounding impact in the worlds of both music and technology. On top of headlining events like the BRITS Week in Soho, she was honoured with the Music Metaverse Award at the Metaverse Entertainment World Summit in Monaco, a recognition that affirms her place as one of the most innovative artists in the digital age.

As VNCCII continues to break new ground in the music industry, she is preparing for the release of her debut album and science fiction novel. VNCCII's work connects art, storytelling, and music to the space industry, aiming to uplift humanity's consciousness and create inspiring messages to send to space, positively progressing the future of humanity through technology.

The music from her debut album will be sent to Deep Space January 2025 in an exciting partnership with LifeShip via a SpaceX Falcon 9 rocket. Her science fiction novel will also be memorialized on the Moon in 2025 in partnership with the company NanoFiche for NASA's Astrobot's Griffin Lander Mission. NanoFiche is the archival of choice for a "million-year archive", for its potential to last billions of years in space. VNCCII's commitment to the space industry extends to her work at the Interstellar Foundation, a non-profit organization working on the next 'Golden Record' to Space.

*"I'm looking forward to sharing exclusive insights and sneak peaks from my upcoming debut music album, novel, and science fiction franchise at this year's Web Summit. My mission to help uplift the consciousness of humanity and inspire humanity to embrace an abundance mindset. Creativity is an empowerment tool where we can become causal agents for our transformative future."*

- Samantha Tauber (VNCCII)
