

Treble to Showcase AI-Enhanced API Intelligence Platform at Web Summit 2024

Treble to Unveil Treble 3.0 and AI Assistant Alfred at Booth E175, Pavilion 1

Treble, the API Intelligence Platform, is excited to announce its participation as a sponsor at **Web Summit 2024**, taking place in Lisbon from November 11-14. Just three weeks after the successful launch of [Treble 3.0](#), the company will showcase its AI-enhanced API intelligence platform at booth **E175, Pavilion 1**, offering attendees an exclusive first look at its latest features designed to revolutionize API innovations.

*"Web Summit is the perfect venue for us to connect with the global tech community and demonstrate how Treble 3.0 can transform API initiatives," said **Vedran Cindrić, Founder of Treble**. "We're eager to show how our new AI assistant, Alfred, and enhanced platform capabilities can empower organizations on their API-first journeys."*

Introducing Alfred – Your AI Assistant for Navigating the API Landscape

As part of the Treble 3.0 showcase, attendees will meet [Alfred](#), the AI assistant that helps organizations discover and integrate APIs 10x faster. Working within Treble or any developer portal, Alfred requires no pre-training and is compatible with any model. This AI-driven feature reduces the learning curve, making API initiatives more accessible and efficient.

Key Features of Treble 3.0 Highlighted at Web Summit:

- **Observability for All:** Dynamic dashboards accessible to both technical and non-technical stakeholders provide a unified platform for API discovery and insights, supporting adoption across diverse teams without the need for technical expertise.
- **Comprehensive API Experience:** The new API Catalog simplifies the API-first journey by making API discovery more intuitive. Auto-generated documentation facilitates a cohesive developer experience, supporting faster integration for new users.
- **Real-Time API Insights:** Organizations gain near-instant visibility into their API landscape's health. The API Score feature evaluates performance across critical metrics, enabling teams to maintain optimal quality, security, and compliance.
- **Enhanced API Compliance:** Treble 3.0 assists in complying with data protection standards like GDPR, PCI-DSS, and CCPA. The platform flags potentially non-compliant data, offering clear pathways to strengthen API security.
- **Effortless API Integrations with Alfred:** Expanded SDK options, gateway integrations, and support for OpenAPI specifications simplify data integration into Treble. Alfred provides

integration snippets and guides users through the process, consolidating API interactions in one place.

Already trusted by over **150,000 users** from Fortune 500 companies and handling more than **two billion API requests monthly**, Treble continues to serve as a strategic tool for businesses aiming to enhance their API programs.

Visit Treble at Booth E175, Pavilion 1

Web Summit attendees are invited to visit Treble at booth E175, Pavilion 1 to experience live demonstrations of **Treble 3.0 and Alfred**. The Treble team will be on hand to discuss how their solutions can accelerate your API initiatives and answer any questions.

About Treble

Treble is a platform created by API developers to streamline the creation, deployment, and maintenance of APIs, empowering engineering, product, and business teams in organizations to truly understand their APIs in under a minute with advanced AI technologies. According to an independent study by **Nucleus Research**, Treble helped one customer, Autopix, achieve a **247% ROI within the first six months**. For more information, visit www.treble.com.
