ZeroThreat to Launch AI-Powered Web App and API Vulnerability Scanner at Web Summit 2024

Revolutionizing Cybersecurity for Web Applications and APIs with Enhanced Threat Detection. Attendees can experience real-time scans on their own Web Apps and APIs with the ZeroThreat Team.

Lisbon, November 2024 – ZeroThreat, one of the USA-based disruptive startups in the cybersecurity industry, is thrilled to announce the launch of the commercial version of its vulnerability scanner at this year's Web Summit. Taking place in Lisbon from November 11-14, Web Summit attendees will be the first to experience ZeroThreat's AI-powered security features, designed to detect, remediate, and prevent vulnerabilities with unmatched accuracy and efficiency in real time.

B2B SaaS companies face increasing pressure to release frequent software updates, often slowed by critical security concerns. ZeroThreat addresses major risks such as accidental exposure of unauthorized APIs, a leading cause of data leaks, and ensures robust authentication and authorization in microservice and API-based projects. By reducing the vulnerability detection and resolution cycle from days to hours, ZeroThreat empowers businesses to confidently launch secure products on time.

ZeroThreat's vulnerability scanner leverages AI-driven technology and a shift-left security approach to streamline detection with near-zero false positives, reducing manual efforts up to 90%.

ZeroThreat's DAST tool, known for its seamless integration into CI/CD pipelines and Multi-Factor Authentication (MFA) support, will reveal several cutting-edge features for cybersecurity experts and software developers at the Web Summit. These include highly intuitive, AI-powered technical reports, API discovery, enhanced scanning capabilities for APIs, web applications, authenticated pages, and real-time remediation guidance. This exclusive offering will equip organizations with the tools needed to tackle today's increasingly complex cybersecurity threats.

Exclusive Features of ZeroThreat

Near-Zero False Positives: ZeroThreat's built-in threat intelligence helps you eliminate false alarms and concentrate on real threats.

Easy to Set Up, Easy to Use: No technical knowledge or any complex configuration is required to operate ZeroThreat's vulnerability scanner. With just a few clicks, you can easily schedule recurring security scans.

Real-Time Remediation: Utilizing AI and ML, ZeroThreat provides personalized code examples and detailed vulnerability information, streamlining the process of addressing security concerns.

Preferred Scan and Storage Location: Choose a preferred global scanning location and store data in compliance with regional regulations; get control and flexibility in managing data security.

Compliance Coverage: Achieve regulatory compliance reports for OWSAP Top 10, PCI-DSS, SOC2, HIPAA, ISO27001, GDPR, and sensitive data exposure, to meet compliance requirements effortlessly.

API Discovery: Identify and catalog APIs within your environment, providing visibility into all active endpoints. ZeroThreat detects unauthorized APIs, improving security and compliance management.

"At ZeroThreat, we are laser-focused on providing security solutions that reduce heavy lifting for security teams, allowing them to focus on strategic initiatives. Our platform is designed to go beyond traditional security approaches, offering unparalleled accuracy in vulnerability detection and actionable insights that significantly reduce manual efforts." said Dharmesh Acharya, Co-Founder of ZeroThreat.

"Our participation in Web Summit 2024 allows us to showcase our latest advancements and provide organizations with the tools they need to stay ahead in an ever-evolving cybersecurity space", he further added.

About ZeroThreat

ZeroThreat is an emerging startup in cybersecurity, delivering vulnerability detection and assessments at 5x speed without any configuration required. ZeroThreat scans all types of web apps, including SPAs and JavaScript-heavy ones, to minimize external attacks and false positives by avoiding the pitfalls of 90% manual pentest work. Offering seamless integration into existing workflows, ZeroThreat supports businesses in safeguarding critical data and assets without compromising performance or productivity.
