

FOR IMMEDIATE RELEASE

‘Domain’ Launches a New Era of Collaboration in the Age of AI

A new platform that combines human ingenuity with AI organization to make work better.

NEW YORK – [November 11, 2025] – Work has never been more disconnected. Today, and exclusively at Web Summit, Lisbon, Domain is launching to change that. As one of the world’s first collaborative networks powered by human and artificial intelligence, Domain connects people, ideas, and knowledge in one unified space, built for how modern teams actually work: across networks, time zones, and boundaries.

The Problem

Modern work lives across disconnected systems, Slack for communication, LinkedIn for networking, email for coordination. Context splinters, ideas lose continuity, and progress resets with every switch. Domain was built to end that fragmentation.

The Solution

Domain is a collaboration platform powered by AI that connects your work to your network. Every project starts with a context, a product launch, a strategy, a pitch, a brief. Domain instantly brings the right people, perspectives, and AI support into that context so progress compounds.

As you work, Domain’s agent captures your ideas, organizes them, connects them to relevant knowledge, and highlights patterns you might miss. People you trust layer on insight, challenge assumptions, or refine what’s strong. The loop repeats, context grows richer, ideas sharper, and outputs stronger. Over time, your network becomes more valuable because it’s grounded in the currency of contribution.

Breakthrough Capabilities

Connected Context: Domain’s AI maintains a continuous understanding of your work, remembering decisions and surfacing patterns as you go. Unlike prompt-based tools that reset with every use, Domain compounds context and ensures no insight gets lost. It’s like working with someone who never forgets a meeting, note, link, or decision, and uses that memory to make every next step smarter.

Orchestrated Collaboration: Domain turns AI from a passive tool into an active collaborator, joining conversations, maintaining shared context, and guiding alignment. It matches you with the right collaborators at the right moment, based on the value of their contribution, not their profiles.

Compiled Knowledge: Domain surfaces insights grounded in your actual work, not generic thought pieces. The result is hyper-relevant perspectives that deepen collaboration and move ideas forward.

Simply put, Domain is a better place to work, with a better network of people and more relevant content to engage with. Work, network, and knowledge create the most value when converged, and AI is what makes that possible.

Domain was incubated by [ON_Discourse](#), a global network of business leaders, investors and entrepreneurs. The platform builds on years of collective experience designing AI-powered collaboration systems for some of the world's most innovative companies. An early private alpha launched this summer with over 150 of ON_Discourse's community of C-Suite leaders, entrepreneurs and investors getting early access. The early feedback from these users has been incredibly exciting.

"Every great shift in work begins quietly, an early signal before the world catches on," said Toby Daniels, Co-founder of Domain and ON_Discourse. "AI is ready to hold the context of our work. People are ready to reconnect around ideas that matter. The convergence of these will define the next decade of progress."

"LinkedIn keeps professionals connected but not collaborative, while Slack connects teams but not networks," said Dan Gardner, Executive Chairman of Code and Theory and early investor in Domain. "Domain creates connected contexts, gathering the right people, organizing background, and building on every conversation instead of scattering it. The power comes from combining what AI does best, structure, with what humans do best, imagination."

About Domain

Domain is a collaboration platform, powered by AI that connects your work and your network. Domain is headquartered in New York. Join the waitlist at <http://onDomain.ai>. For press inquiries please email toby@ondomain.ai
