

Deque Unveils axe MCP Server: Scalable, Automated Accessibility Testing for the Enterprise Cloud

New Managed Cloud Platform expands accessibility automation across complex environments

Lisbon, Portugal — November 13, 2025 — Deque Systems, the global leader in digital accessibility software and services, today announced the release of its **axe MCP (Managed Cloud Platform) Server**, designed to help enterprises scale accessibility testing across distributed, cloud-based development environments.

Built on Deque's proven axe technology, the **axe MCP Server** delivers robust automation, orchestration, and reporting capabilities that enable large organizations to seamlessly integrate accessibility testing into their CI/CD pipelines and cloud ecosystems. The platform ensures security, performance, and flexibility for even the most complex enterprise architectures.

"The axe MCP Server represents a major step forward in making accessibility testing as scalable and automated as any other aspect of modern software development," said **Preety Kumar, CEO and Founder of Deque Systems**. "Our goal is to make accessibility testing continuous and frictionless — so that inclusion becomes a natural part of how teams build, release, and maintain digital products."

The axe MCP Server offers centralized management, advanced API integration, and compatibility with a wide range of testing tools and environments. It supports organizations seeking to embed accessibility into DevOps workflows while maintaining compliance with standards such as **WCAG 2.2**, **EN 301 549**, and upcoming **EAA 2025** requirements.

Deque will feature live demos of axe MCP Server at **Web Summit Lisbon**, where attendees can explore how the new platform empowers accessibility at scale. Visitors can engage with Deque experts at **Booth E309, Pavilion 3**, and attend **Preety Kumar's panel session "It's time to focus on accessibility"** to hear more about the company's vision for inclusive technology innovation.

About Deque Systems

Deque Systems is the global leader in digital accessibility, providing software, services, and training that empower organizations to build accessible web and mobile experiences. Millions of people use digital products tested with Deque tools every day. Deque's solutions — including the axe suite of testing tools — are trusted by government agencies, Fortune 500 companies, and leading digital agencies worldwide.
